

Solution:

To find the number of shares that are issued and outstanding, we note that the total number of issued shares are 2 million and out of them, 0.375 million shares are in treasury, meaning that they are bought back by the company and hence, are not outstanding.

Thus, the total shares that are issued and outstanding are $2 - 0.375 = 1,625,000$ shares.

The total number of authorized shares are 3.5 million, out of which 2 million are declared issued. Thus, the number of unissued shares will be given by 1.5 million.
